> Tips Memasang Ruby for Dev

Groom your app's Ruby env. with Rbenv

Basic GitHub Checkout way:

```
$ cd
$ git clone https://github.com/rbenv/rbenv.git ~/.rbenv
$ echo 'export PATH="$HOME/.rbenv/bin:$PATH"' >> ~/.bashrc # ~/.zshrc
$ echo 'eval "$(rbenv init -)"' >> ~/.bashrc # ~/.zshrc
$ exec $SHELL
$ git clone https://github.com/rbenv/ruby-build.git ~/.rbenv/plugins/ruby-build
$ echo 'export PATH="$HOME/.rbenv/plugins/ruby-build/bin:$PATH"' >> ~/.bashrc
# ~/.zshrc
$ exec $SHELL
$ rbenv install 2.7.1
```

```
/home/bandithijo
project_a ← ruby 2.7.1
project_b ← ruby 2.6.3
project_c ← ruby 2.5.3
project_d ← ruby 2.4.2
```

Source: Rbenv (GitHub) - https://github.com/rbenv/rbenv/blob/master/README.md Source: GoRails.com - https://gorails.com/setup/ubuntu/20.04#ruby-rbenv

rbenv global 2.7.1

ruby -v

.IRB

(Interactive Ruby Shell)

> Apa itu IRB?

IRB adalah kependekan dari Interactive Ruby.
Sebuah shell yang dapat kita gunakan untuk bermain-main dan bereksplorasi dengan Ruby dan langsung melihat hasilnya.
Definisi ini diistilahkan dengan REPL (Read-Eval-Print-Loop).

Untuk menjalankan IRB, cukup tulis di terminal dengan perintah:

```
$ irb
irb(main):001:0> _
```

Ayo kita coba jalanakan operasi matematika!

```
irb(main):001:0> 1 + 2 * ( 3**4 ) / 5 - 6 \Rightarrow 2
```

Source: RubyGuides - https://www.rubyguides.com/2018/12/what-is-a-repl-in-ruby/

> Customisasi IRB

Secara default, bentuk dari "prompt" IRB akan seperti ini

```
$ irb
irb(main):001:0> _
```

Secara pribadi, saya kurang suka melihat prompt yang terlalu panjang.

Kita bisa menyederhanakan dengan memanggil dengan cara berbeda.

```
$ irb --prompt simple
>> _
```

Untuk membuat prompt "simple" menjadi default yang digunakan, cukup tambahkan pada file ~/.irbc (buka dengan text editor).

```
IRB.conf[:PROMPT_MODE] = :SIMPLE
```

Nah, sekarang apabila teman-teman memanggil irb, maka otomatis akan menggunakan "simple" prompt.

Source: Rake Routes - https://www.rakeroutes.com/customize-your-irb/

.Variabel

Ruby for Beginner
A Programmer's Best Friend

> Apa itu Variabel?

Digunakan untuk memberikan nama & menyimpan nilai (value)

```
In Ruby, Variable is just a label. ... a name for something that you can use to reference this value in your Ruby programs.
```

Just like the name we give to real-world things. When I say "apple" you know what I'm talking about. I don't have to describe it to you. That's what variables do!

Source: RubyGuides - https://www.rubyguides.com/ruby-tutorial/variables/

> Mengecek Class dari Variabel

Darimana kita tahu variable tertentu termasuk dalam Class apa?

Menggunakan .class

```
>> nama = 'Yukihiro Matsumoto'
>> nama.class
⇒ String

>> umur = 55
>> umur.class
⇒ Integer

>> tim_dev = ['Rizal', 'Reza', 'Rizqi']
>> tim_dev.class
⇒ Array
```

> Scope/jangkauan Variabel?

```
Local variable
team_name = "Elite Lokal"
Global variable (prefix: $)
$team_name = "Elite Global"
Instance variable (prefix: @)
@fav_food = "Indomie Instance"
Class variable (prefix: @@)
@@fav_drama = "Itaewon Class"
Constant variable (Huruf Besar)
```

Source: RubyGuides - https://www.rubyguides.com/ruby-tutorial/variables/

PHI = 3.14

> Scope/jangkauan Variabel?

The difference between them? It's on their "scope".

A variable scope answers this question:

"From where can I access this variable?"

This is only going to matter when you start learning about Object-Oriented Programming.

Source: RubyGuides - https://www.rubyguides.com/ruby-tutorial/variables/ Source: RubyGuides - https://www.rubyguides.com/2019/03/ruby-scope-binding/

.Working with String (a)

Ruby for Beginner
A Programmer's Best Friend

.Working with String (a)

- > String Concatenation
- > String Interpolation
- > Mengecek Method pada Class
- > String Mehod yang Biasa Digunakan
- > Escaping Character

Combining multiple string

a. Menggunakan operator +

```
>> nama_depan = 'Yukihiro'
>> nama_belakang = 'Matsumoto'
>> nama_lengkap = nama_depan + nama_belakang
>> puts nama_lengkap
"YukihiroMatsumoto"
>> puts nama_depan + ' ' + nama_belakang
"Yukihiro Matsumoto"
>> puts 'Yukihiro' + ' ' + 'Matsumoto'
"Yukihiro Matsumoto"
```

Combining multiple string

b. Menggunakan operator +=

```
>> nama = ''
>> nama += 'Yukihiro'
>> nama += ' '
>> nama += ' Matsumoto'

>> puts nama
"Yukihiro Matsumoto"
```

Combining multiple string

c. Menggunakan Ruby concat method

```
>> nama = ''
>> nama.concat('Yukihiro')
>> nama.concat(' ')
>> nama.concat('Matsumoto')
>> puts nama
"Yukihiro Matsumoto"
```

Combining multiple string

d. Menggunakan operator << (alias dari Ruby <u>concat</u> method)

```
>> nama = ''
>> nama << 'Yukihiro'
>> nama << ' '
>> nama << 'Matsumoto'

>> puts nama
"Yukihiro Matsumoto"

>> puts nama << 'Yukihiro' << ' ' << 'Matsumoto'
"Yukihiro Matsumoto"</pre>
```

```
>> 'nomor rumah = ' << 1
# TypeError: no implicit conversion of Fixnum into String</pre>
```

Combining multiple string

d. Menggunakan operator << (alias dari Ruby <u>concat</u> method)

Problem:

```
>> 'nomor rumah = ' << 1

⇒ "nomor rumah = \u0001"
```

Solusi:

```
>> 'nomor rumah = ' << 1.to_s

⇒ "nomor rumah = 1"
```

Menggunakan to_s method untuk mengkonversi Integer ke String.

```
Source: RubyGuides - https://www.rubyguides.com/2019/07/ruby-string-concatenation/Source: RubyGuides - https://www.rubyguides.com/2018/09/ruby-conversion-methods/
```

Combining multiple string

e. Menggunakan Ruby <u>prepend</u> method (kebalikan concat)

```
>> nama = ''
>> nama.prepend('Yukihiro')
>> nama.prepend(' ')
>> nama.prepend('Matsumoto')
>> puts nama
"Matsumoto Yukihiro"
```

If you're thinking there is an append method, well there isn't for String.

append method only for arrays.

> String Interpolation

Interpolation or merging of variables into strings is a powerful technique. It allows you to "templatize" a string.

a. Menggunakan "#{}"

```
>> nama_depan = 'Yukihiro'
>> nama_belakang = 'Matsumoto'
>> umur_sekarang = 55
>> puts "Nama: #{nama_depan} #{nama_belakang}. Umur: #{umur}"
"Nama: Yukihiro Matsumoto. Umur: 55"
```

Syarat: String harus menggunakan tanda petik ganda ("...")

Source: RubyGuides - https://www.rubyguides.com/ruby-tutorial/variables/

> Mengecek Method pada Class

Darimana kita tahu method apa yang tersedia dari sebuah Class?

Menggunakan .methods

```
>> nama = 'Yukihiro Matsumoto'
>> nama.class
⇒ String

>> nama.methods
⇒[:unicode_normalize, :unicode_normalize!, :ascii_only?, :unpack, :unpack1, :to_r, :shellsplit, :encode, :encode!, :shellescape, :%, :include?, :*, :+, :pretty_print, ..., ..., ...]
```

Berapa banyak jumlah method yang tersedia? (misal: String)

```
>> nama.class
String

>> nama.methods.count

⇒ 192
```

> String Method yang Biasa Digunakan

.upcase()

- >> nama = 'Yukihiro Matsumoto'
- >> nama.upcase
- → "YUKIHIRO MATSUMOTO"

.capitalize()

- >> nama = 'yukihiro matsumoto'
- >> nama.capitalize
- ⇒ "Yukihiro matsumoto"

.length()

- >> nama = 'Yukihiro Matsumoto'
- >> nama.length
- \Rightarrow 18

.downcase()

- >> nama = 'Yukihiro Matsumoto'
- >> nama.downcase
- ⇒ "yukihiro matsumoto"

.reverse()

- >> nama = 'yukihiro matsumoto'
- >> nama.reverse
- ⇒ "otomustam orihikuy"

More: Ruby-Doc - https://ruby-doc.org/core-2.7.0/String.html

> String Method yang Biasa Digunakan

```
.sub()
                                    .gsub()
                                    >> nama = 'Budi Budi Bayu'
>> nama = 'Yukihiro Matz'
>> nama.sub('Matz', 'Akita')
                                    >> nama.gsub('Budi', 'Bayu')
⇒ "Yukihiro Akita"
                                    ⇒ "Bayu Bayu Bayu"
.strip()
                                    .split()
                                    >> nama = 'Budi Budi Bayu'
>> nama = ' matsumoto
                                    >> nama.split(' ')
>> nama.strip
                                    ⇒ ["Budi", "Budi", "Bayu"]
⇒ "matsumoto"
```

dan masih banyak lagi...

More: Ruby-Doc - https://ruby-doc.org/core-2.7.0/String.html

> Escaping Character

Bagaimana cara melakukan escaping character pada String?

```
>> 'malam jum'at'
SyntaxError: unexpected local variable or method...
>> 'malam jum\'at'
"malam jum'at"
```

Alternatif gunakan double quote untuk escaping single quote:

```
>> "malam jum'at"
"malam jum'at"
```

Contoh-contoh escaping character

```
\' : single quote
\" : double quote
\\ : backslash
\n : new line
\r : carriage return
\\ t : tab
\t : backspace
\f : form feed
\v : vertical tab
est.
```

More: AppSignal - https://blog.appsignal.com/2016/12/21/ruby-magic-escaping-in-ruby.html

.Working with String (b)

.Working with String (b)

> Get Input from User (Console)

> Get Input from User (Console)

Ruby use gets method to get the user input (as a string).

.gets

```
>> puts "Nama kamu siapa? "
>> nama = gets
Yukihiro

⇒ "Yukihiro\n"
```

"\n" didapatkan saat kita menekan tombol enter. Bagaimana cara mengilangkannya?

Gunakan String#chomp method.
.gets.chomp

```
>> puts "Nama kamu siapa? "
>> nama = gets.chomp
Yukihiro

    "Yukihiro"
```

Source: Ruby-Doc - https://ruby-doc.org/core-2.7.1/IO.html

.Working with Number

.Working with Number

- > Arithmetic Operation
- > Order Arithmetic Operation
- > Loop with Times
- > Upto & Downto

> Arithmetic Operation

Nothing new here...

```
>> 5 + 5
\Rightarrow 10
>> 10 * 2
\Rightarrow 20
>> 2 ** 3
\Rightarrow 8
>> 10 % 2
\Rightarrow 0
>> 10.even?
\Rightarrow true
>> 4.odd?
\Rightarrow false
```

```
>> 10 / 2.0
\Rightarrow 5.0
>> 9.0 / 3
\Rightarrow 3.0
```

Source: Ruby-Doc - https://ruby-doc.org/core-2.7.1/IO.html

> Order Arithmetic Operation

Perhatikan urutan dari pengerjaan operator.

Gunakan jembatan "PEMDAS" untuk mengingatnya.

Parenthesis ()
Exponential **
Multiplication *
Division /
Addition +
Substraction -

Source: Ruby-Doc - https://ruby-doc.org/core-2.7.1/IO.html

> Loop with times

Salah satu method yang mudah untuk melakukan looping / perulangan terhadap angka.

.times

```
?> 3.times do
?> puts 'HelloDev'
>> end

HelloDev
HelloDev
HelloDev
```

.times (one line)

```
>> 3.times { puts 'HelloDev' }

HelloDev
HelloDev
HelloDev
```

```
?> 2.times do |n|
?> puts n
>> end
0
1
```

```
>> 2.times do { |n| puts n }

0
1
```

> Upto & Downto

Salah satu method yang mudah untuk melakukan looping / perulangan terhadap angka dengan rentang tertentu.

.upto().each

```
?> 1.upto(3).each do
?> puts 'HelloDev'
>> end

HelloDev
HelloDev
HelloDev
```

.downto().each

```
?> 3.downto(1).each do
?> puts 'HelloDev'
>> end

HelloDev
HelloDev
HelloDev
```

```
?> 1.upto(2) do |n|
?> puts n
>> end
1
2
```

```
?> 2.downto(1).each do |n|
?> puts n
>> end
1
2
```

> Tips mencari dengan Google

Gunakan prefix "ruby" sebagai awalan kata kunci untu mencari di Google.

Q ruby

Kemudian, diikuti dengan keyword apa yang mau dicari. Misal, tentang perulangan dengan method "each".

Q ruby each loop

Dengan cara ini, kita dapat membuat hasil pencarian yang lebih spesifik untuk bahasa pemrograman Ruby.
